Predictive Services Discussion: An upper low is forecast to move southwest over the Desert Southwest and cutoff over southern California and northern Baja California. An upper-level trough will move over the northern Plains and into the Great Lakes and Midwest, with background upper-level ridging likely over the West outside of the cutoff low. A weak mid-level shortwave trough may rotate into the Pacific Northwest as well. A cold front will move south and east through the central Plains and Upper Midwest, with a thermal trough likely remaining along the Pacific Northwest and northern California coasts and in the Central Valley. Dry and breezy conditions are likely ahead of and behind a cold front on portions of the Plains. Dry conditions are expected across much of the Great Basin, central and northern California, and into the Northwest, with offshore winds likely in portions of northern California, western Oregon, and possibly western Washington. Poor to moderate relative humidity recovery is likely in these areas as well. Isolated to scattered thunderstorms and showers are likely in southern California and portions of the Southwest. Isolated to scattered showers and thunderstorms are likely over the Great Lakes and Northeast, with a cold front moving into New England and south Florida.

Entrapment Avoidance

Operational Engagement Category

When determining strategy and tactics, avoid situations where firefighters may become entrapped. Consider the following discussion points related to escape routes and safety zones.

- Discuss the three types of safety zones and describe examples.
 - The burn/black
 - Natural features
 - Constructed sites
- Discuss the guidelines for size and distance separation to avoid radiant heat injury.
 - Four times the maximum flame height (20 foot-flame height x 4 = 80 foot-radius from firefighters)
 - Size based on amount of resources and equipment
- Discuss heat impact factors that will affect the guidelines for distance separation.
 - Convection heat from wind and terrain features
 - Location relative to fire spread
 - Reburn potential of fuel in safety zone
- Discuss how firefighters have a right to know the location of their escape routes and safety zones at all times.
- Discuss how firefighters have a right to ask for clarification when faced with unclear instructions or fear of the unknown.
- Describe a basic procedure for identification of effective escape routes and safety zones.
 - Observe
 - Visualize
 - Identify
 - Time
 - Inform
 - Evaluate
