Predictive Services Discussion: A cutoff low will remain over southern California and northern Baja California. Westerly flow aloft will strengthen over the Pacific Northwest and Northern Rockies, with weak ridging over the West away from the cutoff low. An upper low will slowly move eastward across the Great Lakes, with troughing extending over much of the eastern US and a cold front sliding east through the Appalachians. Above normal temperatures are expected for much of the West. Dry and breezy west-southwest winds are likely along the Sierra Front, in portions of the Cascade Gaps, interior Northwest, northern Great Basin, along and east of the Rockies in Montana, and Wyoming amid downslope flow and stronger westerly flow aloft. Isolated to scattered thunderstorms are forecast across portions of far southern California, Arizona, and western New Mexico, with wetting rain most likely in east-central Arizona into west-central New Mexico over the higher terrain. Showers may move into western Washington overnight, with showers and sporadic lightning in portions of the Great Lakes and New England.

Fatigue \& Stress

Firefighter Health \& First Aid

Accumulated (chronic) Fatigue is defined as fatigue from which normal rest does not produce recovery. Accumulated fatigue is often caused by extended periods of stress with inadequate recovery periods, which results in decreased productivity, compromised immune function, and reduced alertness. Fatigued workers perform poorly, behave carelessly, tolerate greater errors, and become inattentive. Chronic fatigue often results in increased stress, which may present itself through certain behavioral and physiological indicators, such as those described below:

- Behavioral indicators:
- Decreased motivation and low morale.
- Increased irritability and depression.
- Physiological indicators:
- Confusion, poor problem solving.
- Poor abstract thinking.
- Poor attention/decisions.
- Poor concentration/memory.
- Extreme emotional responses.
- Social/behavioral changes.
- Recommendations for chronic fatigue/stress are:
- Take longer periods of rest/recovery.
- Ensure that workers are adequately rested before they begin work shifts.
- Provide periodic rest breaks to allow physical and mental recovery.
- Alternate between heavy and light tasks.
- Eat well-balanced meals regularly, with energy supplements during periods of high exertion.
- Maintain hydration.
- Ensure workers maintain good personal hygiene.
- Maintain high standards of physical fitness and work capacity.
- In extreme cases, personnel may need to be relieved of their duties.
