Predictive Services Discussion: West-southwest flow aloft will strengthen over the Pacific Northwest, Northern Rockies, northern California, and the northern Great Basin as a strong upper-level trough approaches the West Coast. A cutoff low will slowly move northeast into the Southwest. An upper-level trough will swing through the Northeast, with troughing remaining over much of the eastern. A Pacific cold front will move into the Pacific Northwest overnight. Dry and breezy west-southwest winds will develop ahead of the trough along the Sierra Front, interior Northwest, northern Great Basin, Wyoming, and east of the Rockies in Montana. Elevated to critical conditions are forecast in portions of the central and southern Plains, focused on the Texas Panhandle, northwest Oklahoma, and central Kansas. Scattered showers and thunderstorms will continue over the Southwest with localized flash flooding possible. Isolated thunderstorms are also possible for southeast Utah into southwest Colorado. Widespread showers will develop over western Washington and northwest Oregon with precipitation spreading into portions of southwest Oregon, far northwest California, northern Washington, and far northern Idaho overnight.

## Aviation Mishap Response <br> Aviation Category

It is critical to respond quickly and effectively to aviation mishaps. A posted and accessible written mishap response action plan is an important first step. A checklist of actions will ensure that nothing is missed in a stressful, time-critical period. All crew members must know where to find the plan and must understand how to use it in an emergency.

- Immediate, positive action is necessary. Any delay may affect someone's chances of survival.
- Conduct rescue operations with the following priorities in mind:
- Preserve life. Ensure the safety of all rescuers as you respond to assist any victims.
- Do whatever is necessary to extricate injured occupants and to extinguish fires, keeping in mind the necessity of protecting and preserving evidence.
- Document and/or photograph the location of any debris that must be disturbed in order to carry out rescues and/or fire suppression activities.
- Secure the area. Treat the crash site as a crime scene. Arrange for security at the accident scene if necessary. Determine if hazardous materials were on the aircraft. Deny access except to credentialed officials and escorted media.
- Be aware that crash sites can be dangerous due to hazardous cargo, flammable and toxic fluids, sharp objects, disease, adverse terrain, hot/cold weather conditions, and fire.
- Exercise good judgment, utilize available protective devices and clothing, and use extreme caution when working near the wreckage site.
- Do not exceed your physical limitations.

Activity: Review your unit's mishap response plan with the crew. Consider practicing with a crash rescue drill or scenario.
