### National Interagency Coordination Center Incident Management Situation Report Tuesday, October 12, 2021 – 0730 MDT National Preparedness Level 3

### **National Fire Activity:**

Initial attack activity:	Light (15 fires)
New large incidents:	2
Large fires contained:	1
Uncontained large fires: ***	26
Area Command teams committed:	0
NIMOs committed:	0
Type 1 IMTs committed:	3
Type 2 IMTs committed:	8

Nationally, there are 25 fires being managed under a strategy other than full suppression. \*\*\*Uncontained large fires include only fires being managed under a full suppression strategy.

Link to Geographic Area daily reports.

Link to Understanding the IMSR.

One RC-26 aircraft with Distributed Real-Time Infrared (DRTI) capability and support personnel from the 141st Air Refueling Wing (Washington Air National Guard) has been deployed to Sacramento, CA in support of wildland fire operations. Also supporting this aircraft are four ground controllers from multiple U.S. Air National Guard squadrons.

### Southern California Area (PL 2)

New fires:	1
New large incidents:	2
Uncontained large fires:	4
Type 1 IMTs committed:	2
Type 2 IMTs committed:	1

**KNP Complex** (2 fires), Sequoia & Kings Canyon National Parks, NPS. IMT 1 (CA Team 2) and IMT 1 (CA Team 1). Nine miles northeast of Three Rivers, CA. Short grass, brush and timber. Minimal fire behavior with flanking, creeping and smoldering. Numerous residences and infrastructure threatened. Evacuations, area, road and trail closures in effect.

**Windy**, Tule River Fire Department, BIA. IMT 2 (GB Team 6). Twenty-two miles east of Porterville, CA. Timber and brush. Minimal fire behavior with flanking, backing and creeping. Several communities, numerous structures and infrastructure threatened. Evacuations, area, road and trail closures in effect.

\* Alisal, Los Padres NF, USFS. Twenty miles northwest of Santa Barbara, CA. Chaparral. Extreme fire behavior with long-range spotting, wind-driven runs and running. Numerous structures and infrastructure threatened. Evacuations, area, road and trail closures in effect.

\*\*\*Changes in some agency YTD acres reflect more accurate mapping or reporting adjustments.

\*\*\*Additional wildfire information is available through the Geographic Areas at https://gacc.nifc.gov/

**Predictive Services Discussion:** A deep upper low will move from the Four Corners into Colorado and the adjacent High Plains, while a weaker trough approaches the Northwest. A weakening upper trough will exit the Great Lakes with upper ridging from the northern Gulf Coast through the Appalachians and Northeast. A cold front will move from the Colorado Rockies and New Mexico into the central and southern Plains with a strong surface low developing over northeast Colorado and moving into the northern Plains. Elevated to critical conditions will continue across the California Central Valley to the Coast Ranges and Sierra Foothills with the strongest winds in the morning, slowly diminishing during the afternoon. Strong south to southwest winds are also forecast over New Mexico, Colorado, and the southern and central Plains, with elevated to critical conditions most likely for the southern High Plains, but recent rain could help mitigate these conditions. Snow will continue across southern Montana into Wyoming while developing over the Black Hills. Snow is also likely over the central and northern Plains with showers and scattered thunderstorms for the Plains of Kansas, Oklahoma, and Texas, including severe thunderstorms. Scattered showers will exit the northern Great Lakes while scattered thunderstorms continue over South Florida.

# Fuel Handling – Watch Out for "Normalization"

There is an apprehension that the safety concerns surrounding the use of gasoline in firefighting operations can get "normalized". In firefighting, we use gasoline for a variety of applications, including pumps, chainsaws, vehicles, drip torches, etc.

"Normalization" of hazards or risks is when we get comfortable around these hazards and take shortcuts without consequence. After a while, we can get so comfortable with these shortcuts that we forget about the original mitigation to reduce the hazard or risk.

- 1. What do we use gasoline for in our firefighting operations?
- 2. What risks are associated with our uses of flammable liquids?
- 3. What mitigations or procedures are in place for handling fuel?
- 4. What can you do to prevent being sprayed or doused in gasoline from gas tank pressure?
- 5. What should you do to extinguish someone who is on fire?

Check out <u>this new RLS from</u> <u>2015</u> that spotlights **14 instances** of fuel igniting incidents reported in the past 5 years and discusses drip torch burn injuries.

5 Days after burn injury

### **Chainsaw Operators:**

Watch this short safety video for information on preventing fuel leakage, identification of potential vapor lock/tank pressurization, mitigation measures for vapor lock/tank pressurization, and reporting procedures for future occurrences: <u>Chainsaw Safety</u>.
