Nationally, there are 22 fires being managed under a strategy other than full suppression.
***Uncontained large fires include only fires being managed under a full suppression strategy.
Link to Geographic Area daily reports.
Link to Understanding the IMSR.
This report will be posted Monday - Friday at 0730 Mountain time unless significant activity occurs.
One RC-26 aircraft with Distributed Real-Time Infrared (DRTI) capability and support personnel from the 141st Air Refueling Wing (Washington Air National Guard) has been deployed to Sacramento, CA in support of wildland fire operations. Also supporting this aircraft are four ground controllers from multiple U.S. Air National Guard squadrons.

Predictive Services Discussion: Upper-level troughing is forecast over the Rockies into the Plains with upperlevel ridging developing along the West Coast. Upper-level ridging will continue over the Gulf Coast, Appalachians, Great Lakes, and Northeast. A cold front will move through Great Lakes and into the Ohio Valley, Mid-Mississippi Valley, and south Texas. Gusty north winds are likely over portions of northern California with low RH and poor overnight recovery. Gusty northerly to offshore winds will develop this afternoon in portions of the Transverse Ranges in southern California and continue overnight. Gusty westerly winds are likely across much of the Rockies with stronger downslope winds likely across New Mexico into the adjacent High Plains. Scattered valley rain and mountain snow showers are likely across the Rockies from Colorado through western Montana. Scattered showers and thunderstorms are forecast across eastern Texas, Oklahoma, and Kansas through the Mississippi Valley and into the southern Great Lakes. Showers are likely to continue across western Washington and northwest Oregon amid weak onshore flow.

# Fire Not Scouted and Sized Up 

Operational Engagement Category

Watch Out Situation \#1 is an issue during initial attack and every time new resources arrive at a fire.

- Before taking action on the fire, address the following:
- Can you personally observe the fire or should you use scouts?
- Describe ways you can scout and size up a fire.
- Do you know the location of the fire perimeter?
- Discuss situations when the fire perimeter may not be obvious (unburned sections due to spot fires, etc.).
- Do you know the direction of fire spread? When isn't the direction of fire spread obvious (wind shifts, spot fires, etc.)?
- Does the direction of fire spread increase risk?
- Talk about situations where you may have to approach the head of the fire (hiking down from a helispot, approaching from an existing road, erratic winds, etc.).
- Do you know the fuels and their condition? What kind of information will you assume from what you already know about fuel types (spot fires in fir, extreme fire potential in flashy fuels, etc.)?
- What information can aerial resources provide about the fire?
- Do topographic hazards exist? What can you assume from the kind of terrain near and within the fire perimeter (slope, chimneys, aspect, etc.)?
- Does enough information exist to establish a plan of attack? When do you have enough information to begin fighting fire? What do you need to know?
- Do other dangers exist? Have you talked about factors specific to the work area (hunters in the vicinity, drought conditions, snag patches, etc.)?
To reduce the risks:
- Post lookouts until the fire is sized up and escape routes and safety zones are established.
- Retreat if the situation is too complex. Review fires where you had to wait until your assigned area of the fire was scouted and sized up before you were allowed onto the fireline.
