National Interagency Coordination Center Incident Management Situation Report Friday, November 12, 2021 – 0730 MDT National Preparedness Level 1

National Fire Activity (November 5, 2021 – November 11, 2021): Initial attack activity: Light (185 fires)

initial attack activity:	Light (185 fire
New large incidents:	0
Large fires contained:	1
Uncontained large fires: ***	3
Area Command teams committed:	0
NIMOs committed:	0
Type 1 IMTs committed:	0
Type 2 IMTs committed:	0

Nationally, there are 0 fires being managed under a strategy other than full suppression.

Link to Geographic Area daily reports.

Link to Understanding the IMSR.

This report will post every Friday at 0730 Mountain time unless significant activity occurs.

^{***}Changes in some agency YTD acres reflect more accurate mapping or reporting adjustments.

***Additional wildfire information is available through the Geographic Areas at https://gacc.nifc.gov/

Predictive Services Discussion: Elevated to possibly locally critical fire weather conditions are forecast in portions of the central and southern Plains today and Saturday while light offshore flow will continue over southern California. Strong westerly winds are likely over central and eastern Montana Saturday and early next week with very strong downslope winds possible across north-central Montana Monday. Windy and dry conditions are likely to return to portions of New Mexico and the southern Plains early next week as well. Additionally, dry and breezy conditions on the High Plains remain possible at times next week. Most of the southern US from California to Georgia and Florida will be dry for the next week with much above normal temperatures for southern California and the Southwest. A wet pattern will continue for much of the Pacific Northwest into the Idaho Panhandle and northwest Montana into early next week with flooding possible west of the Cascades in Washington. Showers with cool temperatures are also likely across the Great Lakes into the Northeast this weekend into early next week as well.

http://www.predictiveservices.nifc.gov/outlooks/outlooks.htm

Lookouts are often best situated to notice the cumulative changes of fire behavior.

Standard Firefighting Order #5 is: Post lookouts when there is possible danger.

• Discuss why lookouts should be posted at all times.

What are you looking for when you are selecting a lookout location?

- Choose a good vantage point, preferably with a good overview of the entire area where firefighters are located, including escape routes and safety zones.
- Never rely exclusively on aircraft as your lookout.

What are the desired qualities, capabilities, knowledge, and responsibilities of a lookout?

- Experienced firefighter.
- Solid knowledge of fire behavior and the ability to recognize and monitor other environmental hazards.
- Knowledge of crew locations, escape and safety locations, and trigger points.
- Good communicator.
- Knowledge of weather patterns, and signs of incoming weather changes.
- Advises the crew of fire behavior changes, and tracks weather trends and relays the information.
- Monitors and accounts for all individuals within the assigned area at all times, and notifies others if breaks are needed.

What is the necessary equipment for a lookout?

• Personal protective equipment (PPE), radio with extra batteries, compass, binoculars, belt weather kit, an Incident Action Plan (IAP), map, food, water, and watch.
