

**National Interagency Coordination Center
Incident Management Situation Report
Friday, November 26, 2021 – 0730 MDT
National Preparedness Level 1**

National Fire Activity (November 19, 2021 – November 25, 2021):

Initial attack activity:	Light (456 fires)
New large incidents:	5
Large fires contained:	7
Uncontained large fires: ***	5
Area Command teams committed:	0
NIMOs committed:	0
Type 1 IMTs committed:	0
Type 2 IMTs committed:	0

Nationally, there are 0 fires being managed under a strategy other than full suppression.

***Uncontained large fires include only fires being managed under a full suppression strategy.

***Changes in some agency YTD acres reflect more accurate mapping or reporting adjustments.

***Additional wildfire information is available through the Geographic Areas at <https://gacc.nifc.gov/>

Predictive Services Discussion: A marginal to moderate Santa Ana wind event will continue through this morning across southern California with winds weakening throughout the day. Low relative humidity will continue across much of southern California, southern Nevada, and western Arizona through the weekend into next week. Dry, post-frontal conditions are expected across much of the Southeast today through the weekend and possibly lingering across portions of the Southeast into mid next week. Dry, post-frontal conditions are also likely on portions of the central and southern Plains today into tomorrow.

A wet pattern for the Pacific Northwest, especially along and west of the Cascades, and into portions of the Northern Rockies, mostly northern Idaho and northwest Montana, is expected to continue into next week. However, well above average temperatures with little to no chance of precipitation are likely for much of the West into next week. Dry conditions with temperatures increasing to above normal are forecast for much of the Plains this weekend and next week. The southern half of Texas will receive precipitation today through the weekend with higher amounts along the Texas Gulf Coast.

Retardant and Water Drop Safety

Aviation Category

Retardant (jell, foam), paracargo, and water drops on a fire are routine events. However, there are risks associated with these missions that can pose serious threats to personnel and equipment. Consider the following for all drops you are coordinating:

- Be aware of the location and flight patterns (final approach, drop zone, exit) of aircraft during drop operations.
- Ensure you have positive contact with the pilot before the drop.
 - Clear all persons, vehicles, and animals from the danger zone prior to the arrival of the aircraft.
 - Beware of streamers or parachutes that do not open.
- Personnel can be injured by the impact of material dropped by aircraft. Clear personnel out of the target area before the drop is conducted. If an individual is caught unaware in a drop zone:
 - Hold hand tools away from your body.
 - Lie face down with hardhat in place and head toward the oncoming aircraft.
 - Grasp something firm to prevent being carried or rolled about by dropped liquid.
 - Do not run unless escape is guaranteed.
 - Get clear of dead snags and tree tops.
 - Be aware of rolling debris below the drop site in steep terrain.
- Use caution when working in an area covered by retardant. Surfaces are slippery.
- Wash the retardant off your skin as soon as possible to prevent irritation.
