

**National Interagency Coordination Center
Incident Management Situation Report
Friday, February 18, 2022 – 0730 MDT
National Preparedness Level 1**

National Fire Activity (February 11 – February 17, 2022):

Initial attack activity:	Moderate (1,452 Fires)
New large incidents:	45
Large fires contained:	30
Uncontained large fires: ***	15
Area Command teams committed:	0
NIMOs committed:	0
Type 1 IMTs committed:	0
Type 2 IMTs committed:	0

Nationally, there are 0 fires being managed under a strategy other than full suppression.

***Uncontained large fires include only fires being managed under a full suppression strategy.

Southern Area (PL 2)

New fires: 1,316
 New large incidents: 42
 Uncontained large fires: 14

- * **Woodman**, National Forests in Mississippi, USFS. Four miles northwest of Gloster, MS. Timber and brush. Minimal fire behavior.
- * **508**, National Forests in Mississippi, USFS. Ten miles north of Morton, MS. Timber and brush. Minimal fire behavior with smoldering.
- * **Katy**, Okmulgee Field Office, BIA. Three miles west of Dustin, OK. Hardwood litter and grass. Active fire behavior with running and spotting. Structures threatened.
- * **Deere 2**, Okmulgee Field Office, BIA. Four miles southeast of Henryetta, OK. Grass and hardwood litter. Active fire behavior with running and wind-driven runs. Structures threatened.
- * **Greasy Creek**, Okmulgee Field Office, BIA. One mile west of Lamar, OK. Grass and hardwood litter. Extreme fire behavior with running and wind-driven runs. Structures threatened.
- * **Flamesville**, Okmulgee Field Office, BIA. Three miles east of Weleetka, OK. Timber and hardwood litter. Active fire behavior with running and wind-driven runs. Structures threatened.
- * **Bent Branch**, Kentucky DOF. Started on private lands south of Cornettsville, KY. Timber. Active fire behavior with flanking, uphill and wind-driven runs. Residences threatened.
- * **WF5 Southeast Arcadia DeSoto**, Florida Forest Service. Twelve miles southeast of Arcadia, FL. Grass. Active fire behavior.
- * **1980 Road**, Oklahoma DOF. Four miles northwest of Messer, OK. Grass and hardwood litter. Minimal fire behavior with smoldering. Residences threatened.
- * **8 Mile**, Osage Agency, BIA. Four miles southeast of McCord, OK. Timber and gras. Moderate fire behavior with wind-driven runs and running. Structures threatened.
- * **Brokey**, Osage Agency, BIA. Six miles southwest of Bowring, OK. Grass and timber. Active fire behavior with wind-driven runs, running and short crown runs. Residences threatened.
- * **Experiment Station #1**, Texas A&M Forest Service. Started on private land six miles south of Barnhart, TX. Grass and brush. Active fire behavior with wind-driven runs and flanking.
- * **Little Fourche Maline #3**, Oklahoma DOF. Thirty-four miles east of McAlester, OK. Timber and hardwood litter. Active fire behavior with wind-driven runs and flanking.
- * **West Chilli**, Oklahoma DOF. Fourteen miles east of McAlester, OK. Timber and grass. Active fire behavior with wind-driven and uphill runs.

***Changes in some agency YTD acres reflect more accurate mapping or reporting adjustments.

***Additional wildfire information is available through the Geographic Areas at <https://gacc.nifc.gov/>

Predictive Services Discussion:

An upper-level trough will track and deepen southward over the West this weekend into early next week. This trough will bring scattered precipitation to much of the Intermountain West, with the heaviest precipitation across the Cascades and northern Rockies. Additionally, stronger downslope flow will result in elevated to critical fire weather conditions on the southern High Plains tomorrow through Monday before a cold front pushes south through the southern Plains. Elevated to critical conditions remain possible near and ahead of the front from southern New Mexico through west Texas and along the Lower Rio Grande Valley Tuesday into Wednesday. Snow will accompany the cold front across much of the northern and central Plains, with thunderstorms likely returning to portions of the southern Plains and Lower Mississippi Valley on Monday and continuing across portions of the Southeast into the Appalachians and Ohio Valley through mid-next week. However, southern Georgia and Florida are likely to see little if any precipitation into next weekend.

Temperatures will be well below normal for much of the Intermountain West into the Plains for mid to late next week, with Arctic conditions likely from Montana through the northern Plains and into the northern Great Lakes. Light to moderate precipitation is likely from California into the southern Great Basin and greater Four Corners region Tuesday into Wednesday with snow levels below 6,000 feet. A brief period of breezy north to northeast winds are likely Thursday into Friday behind the precipitation across southern California into the Mojave and Sonoran Deserts. A weak cold front may move through northern Washington into northern Idaho and western Montana late next week with light to moderate precipitation.

Helicopter Landing Area Safety

Aviation Category

The following points should be considered when operating around an unimproved landing site:

- Always wear your personal protective equipment (PPE) when working near an operating helicopter (eye, hearing, head, etc.).
- Always get the approval of a flight crew member or the pilot before approaching an operating helicopter.
- Only approach and depart a helicopter as directed. Use a slightly crouched position. Do not run. Always keep in the pilot's field of vision.
- Never go near the tail of helicopters.
- When loading helicopters in uneven terrain, always approach and depart from the down slope (lower) side and do not hold equipment overhead.
- Remove or secure loose articles prior to working around an operating helicopter.
- Do not reach up for or chase after loose objects.
- Blowing dust, sand, or rocks caused by the helicopter's rotor wash can be hazardous. Institute dust abatement actions at the landing area if necessary.
