National Interagency Coordination Center Incident Management Situation Report Tuesday, April 5, 2022 – 0730 MDT National Preparedness Level 2

National Fire Activity:

Initial attack activity:	Light (141 Fires)
New large incidents:	1
Large fires contained:	8
Uncontained large fires: ***	15
Area Command teams committed:	0
NIMOs committed:	0
Type 1 IMTs committed:	0
Type 2 IMTs committed:	0

Nationally, there are 0 fires being managed under a strategy other than full suppression.

Link to Geographic Area daily reports.

Link to Understanding the IMSR.

This report will post Monday – Friday at 0730 Mountain time unless significant activity occurs.

Total	75	368,241	20	299	9	1,521	-180

^{***}Uncontained large fires include only fires being managed under a full suppression strategy.

Southern Area (PL 3)

New fires:112New large incidents:1Uncontained large fires:14

Seymour, Tennessee DOF. Started on private land six miles southeast of Seymour, TN. Dormant brush and hardwood slash. Active fire behavior. Reduction in acreage due to more accurate mapping.

Indigo Lane, Tennessee DOF. Seven miles west of Gatlinburg, TX. Dormant brush and hardwood slash. Minimal fire behavior.

Washita River, Oklahoma DOF. Two miles southeast of Durham, OK. Timber, brush and grass. Minimal fire behavior with smoldering. Numerous structures threatened.

Cedar Creek, North Carolina Forest Service. Ten miles southeast of Fayetteville, NC. Southern rough. Minimal fire behavior with smoldering.

Beech, Daniel Boone NF, USFS. Four miles northeast of Manchester, KY. Timber. Minimal fire behavior with backing and flanking.

Hurricane, Daniel Boone NF, USFS. Five miles southwest of Oneida, KY. Timber. Minimal fire behavior with creeping and smoldering.

Valley View Ranch, Georgia Forestry Commission. Seven miles northwest of Trion, GA. Timber. Minimal fire behavior with creeping and smoldering. Residences threatened.

Crittenburg Complex, Texas A&M Forest Service. Started on private land 12 miles southeast of Gatesville, TX. Tall grass and brush. Minimal fire behavior with smoldering. Numerous residences threatened.

Interceptor, Seminole Tribe, BIA. Twenty-one miles southeast of Immokalee, FL. Southern rough and tall grass. No new information.

Rocky Point, National Forests in Florida. Four miles east of Salt Springs, FL. Southern rough. Minimal fire behavior. No new information.

Red Mud, Texas A&M Forest Service. Started on private land 11 miles west of Spur, TX. Short grass. No new information. Last report unless new information is received.

Dubbs Creek, Texas A&M Forest Service. Started on private land five miles northeast of Wheeler, TX. Tall grass. Last report unless new information is received.

137 Ave, Florida Forest Service. One mile west of Tamiami, FL. Chaparral and timber. No new information.

L 30, Florida Forest Service. Twelve miles southwest of Miramar, FL. Tall grass. No new information.

***Additional wildfire information is available through the Geographic Areas at https://gacc.nifc.gov/

Predictive Services Discussion: Elevated to critical winds and relative humidity are forecast for much of the Front Range of the Rockies into the Plains. The most critical conditions are forecast over the central High Plains and much of New Mexico into west Texas where west winds could gust to 60 mph. Breezy conditions with low relative humidity are also forecast over the Mohave and Sonoran Deserts, while Santa Ana winds across southern California will be strongest in the morning before gradually weakening during the afternoon. Scattered light precipitation will continue across the mountains, especially the highest elevations, of the Northwest and Northern Rockies. Showers are also forecast across the western Great Lakes, with showers and thunderstorms, some severe, forecast across the Southeast. The heaviest rain will most likely occur across Mississippi, Alabama, and Georgia. Showers and thunderstorms are likely to spread into the Appalachians and Mid-Atlantic overnight.

Retardant and Water Drop Safety

Aviation Category

Retardant (jell, foam), paracargo, and water drops on a fire are routine events. However, there are risks associated with these missions that can pose serious threats to personnel and equipment. Consider the following for all drops you are coordinating:

- Be aware of the location and flight patterns (final approach, drop zone, exit) of aircraft during drop operations.
- Ensure you have positive contact with the pilot before the drop.
 - Clear all persons, vehicles, and animals from the danger zone prior to the arrival of the aircraft.
 - Beware of streamers or parachutes that do not open.
- Personnel can be injured by the impact of material dropped by aircraft. Clear personnel out of the target area before the drop is conducted. If an individual is caught unaware in a drop zone:
 - Hold hand tools away from your body.
 - Lie face down with hardhat in place and head toward the oncoming aircraft.
 - Grasp something firm to prevent being carried or rolled about by dropped liquid.
 - Do not run unless escape is guaranteed.
 - Get clear of dead snags and tree tops.
 - Be aware of rolling debris below the drop site in steep terrain.
- Use caution when working in an area covered by retardant. Surfaces are slippery.
- Wash the retardant off your skin as soon as possible to prevent irritation.
