# National Interagency Coordination Center Incident Management Situation Report <br> Friday, May 27, 2022 - 0730 MDT <br> National Preparedness Level 2 

National Fire Activity:
Initial attack activity:
New large incidents:
Large fires contained:
Uncontained large fires: **
Area Command teams committed:
Light (67 fires)
0
0
9
0
1
4
4
1

NIMOs committed:
Type 1 IMTs committed: 1
${ }^{* * *}$ Complex Incident Management Teams (CIMTs) are configured to respond to large, complex fires and can expand and reduce staffing in all functional areas as necessary to meet the needs of the incident.

Nationally, there are no fires being managed under a strategy other than full suppression.
**Uncontained large fires include only fires being managed under a full suppression strategy.

## Southwest Area (PL 5)

New fires:
New large incidents: 0
Uncontained large fires: 6
NIMOs committed: 1
Type 1 IMTs committed: 4
Type 2 IMTs committed: 3
Hermits Peak, Santa Fe NF, USFS. NIMO (Team 2), IMT 1 (SW Team 1), IMT 1 (CA Team 2) IMT 1 (CA Team 5) and IMT 1 (PNW Team 2). Twelve miles northwest of Las Vegas, NM. Grass and timber. Active fire behavior with flanking, backing and group torching. Numerous residences threatened. Evacuations, area, road and trail closures in effect.

Black, Gila NF, USFS. IMT 2 (SW Team 5). Twenty-four miles north of Mimbres, NM. Timber and chaparral. Active fire behavior with uphill runs, flanking and spotting. Structures threatened. Evacuations, area, road and trail closures in effect.

Bear Trap, Cibola NF, USFS. IMT 2 (CA Team 10). Twenty-two miles southwest of Magdalena, NM. Timber. Active fire behavior with running and flanking. Structures threatened. Area, road and trail closures in effect.

Cerro Pelado, Santa Fe NF, USFS. IMT 2 (RM Team 3). Seven miles east of Jemez Springs, NM. Grass, brush and timber. Minimal fire behavior with smoldering. Area, road and trail closures in effect.

Elgin Bridge, Arizona DOF. One mile northeast or Elgin, AZ. Brush, grass and chaparral. Active fire behavior with creeping and smoldering. Structures threatened.

Biggs, Capitan District, New Mexico State Forestry. Seven miles east of Corona, NM. Brush and grass. Moderate fire behavior with creeping and smoldering. Structures threatened.

${ }^{* * *}$ Changes in some agency YTD acres reflect more accurate mapping or reporting adjustments. ***Additional wildfire information is available through the Geographic Areas at https://gacc.nifc.gov/

Predictive Services Discussion: A cold front will slowly move south and east into northern California, into the central Great Basin, and onto the northern Plains. Breezy and dry southwest winds of $15-20 \mathrm{mph}$ will develop across much of the southern Great Basin, Arizona, and Four Corners, with critical conditions most likely across northwest Arizona into the southern Great Basin where sustained winds up to 25 mph and gusts to 40 mph are possible. Increasing mid-level instability across the Southwest may also result in plume-dominated large fire activity with potential pyrocumulonimbus development on any active large fires. Isolated mixed wet and dry thunderstorms are possible across northeast Nevada into northwest Utah, with more widespread and wet showers and thunderstorms across the Northwest, Idaho, and western Montana. Widespread showers and thunderstorms will develop from the Appalachians and eastern Great Lakes to the East Coast, with severe thunderstorms and flooding most likely from the Carolinas to the Mid-Atlantic.

# Managing Vehicle Traffic in Smoke 

Vehicles/Roads Category

Smoke has the potential to cause safety hazards to vehicle traffic in the vicinity of active fires, both wildland and prescribed fires, especially at night. The following traffic-related items should be considered and addressed in local unit planning documents prior to an incident/project.

- Identification, location, and phone numbers of local units that have law enforcement and traffic control responsibilities in the smoke-impacted areas. Review any local agreements presently in place with those agencies.
- Identification of important public roads that may be impacted by smoke.
- Identification of adequate equipment and trained personnel to control traffic. This may include warning signs, communications equipment (preferably not using the active fire frequency), and vehicles equipped with warning or flashing lights.
- Identification and phone numbers of radio and television stations that can issue traffic advisories for the smoke-impacted area.
- Identification of alternative traffic routes as part of the incident/project traffic plan.
- Identification of traffic routes subject to temperature inversions, as well as contributory factors such as fog and ice.

When potential smoke-related problems are identified:

- Advise the Incident Commander, Burn Boss, or Agency Administrator that severe smoke exists.
- Notify local law enforcement units and highway departments of a potential problem.
- Implement preplanned actions such as posting smoke warning signs.
- Ensure that proper equipment is ready and appropriate personnel are briefed on contingency plans and are available to control traffic.
