Predictive Services Discussion: Upper high pressure will remain over the southern Plains, with ridging extending across the southern tier of the contiguous US. Above normal temperatures are forecast to continue over much of Texas and Oklahoma, with locally elevated conditions possible across the High Plains of Texas and Oklahoma where south winds of 10-20 mph are likely. Hot temperatures are also expected across the lower elevations of California. Scattered wet monsoon thunderstorms will continue across eastern Arizona, eastern Utah, New Mexico, and Colorado, with debris flows off recent burn scars and flash flooding possible. Showers and thunderstorms will develop across portions of the northern Rockies into the northern and central Plains, with some thunderstorms becoming severe across the Plains. Scattered wet thunderstorms are expected across much of Alabama, Georgia, and Florida as well. Temperatures will begin to warm to above normal across Alaska, with the warmest temperatures in south-central Alaska including the Susitna Valley.

Spot Weather Forecast

Weather – Fire Behavior Category

Spot weather forecasts should be requested or submitted online for those fires that have potential for extreme fire behavior, exceed initial attack, or are located in areas where Red Flag Warnings have been issued.

• Basic elements needed for a spot weather forecast include:

- Location by street address/zip code/city name, latitude/longitude, or US National Grid, or drag to a location using the spot weather forecast request webpage <https://www.weather.gov/spot/>.
- Type of incident (wildfire, prescribed burn, hazardous materials, search and rescue).
- Project/incident name.
- Requesting agency/official, email address, and phone number.
- Elevation (at top and bottom of incident).
- Drainage name, size, aspect, fuel type, and sheltering (full, partial, unsheltered).
- Forecast delivery time (i.e., as soon as possible or a later time), time forecast should start, and time zone.
- Any remarks that can help meteorologists forecast the site, pertinent feedback information (i.e., humidity values were lower than predicted), or special requests (i.e., very interested in potential wind shifts).

Activity

Calibrate your handheld fire weather meter and review belt weather kit use. Refer to the *NWCG Standards for Fire Weather Stations, PMS 426-3*, <https://www.nwcg.gov/publications/426-3>, for information.
