#### National Interagency Coordination Center Incident Management Situation Report Sunday, June 26, 2022 – 0730 MDT National Preparedness Level 2

### **National Fire Activity:**

| Initial attack activity:      | Light (119 fires) |
|-------------------------------|-------------------|
| New large incidents:          | 3                 |
| Large fires contained:        | 7                 |
| Uncontained large fires: **   | 17                |
| Area Command teams committed: | 0                 |
| NIMOs committed:              | 1                 |
| Type 1 IMTs committed:        | 1                 |
| Type 2 IMTs committed:        | 7                 |
| ***Complex IMTs committed:    | 0                 |

\*\*\*Complex Incident Management Teams (CIMTs) are configured to respond to large, complex fires and can expand and reduce staffing in all functional areas as necessary to meet the needs of the incident.

Nationally, there are 45 fires being managed under a strategy other than full suppression. \*\*Uncontained large fires include only fires being managed under a full suppression strategy.

\*1 Hectare = 2.47 Acres

**Predictive Services Discussion:** Isolated mixed wet and dry thunderstorms will develop over portions of eastern Nevada, northern Arizona, and much of Utah. Scattered to numerous wet monsoonal thunderstorms will continue over eastern Arizona, much of New Mexico, and the Colorado Rockies as a cold front moves southwest across these areas. Flooding and debris flows are possible on recent burn scars, especially in northern New Mexico, and temperatures will be 5-15°F cooler than previous days behind the cold front. As the cold front pushes south in Texas and east into the Appalachians, thunderstorms will develop. Well above normal temperatures will continue on the West Coast with low relative humidity. Warm and dry conditions are expected across much of Alaska, with gusty southerly winds over the western half of the state and in the Alaska Range gaps. The warmest and driest conditions will be over eastern portions of the Interior, with isolated thunderstorms possible along the Canadian border.

This Day in History is a brief summary of a powerful learning opportunity and is not intended to second guess or be judgmental of decisions and actions. Put yourself in the following situation as if you do not know what the outcome will be. What are the conditions? What are you thinking?

What are YOU doing?

# Dude Fire (Arizona) - June 26, 1990

**Incident Summary:** June of 1990 will long be remembered as one of the hottest months in Arizona history. On June 26, record temperatures were reported at 122 °F in Phoenix and 106 °F in Payson. In addition to the extreme temperatures, Arizona had been in a severe three-year drought. This combination produced a critically high fire danger throughout the state, especially in the Mogollon Rim country on the Payson Ranger District of the Tonto National Forest (TNF) north of Payson. Fuels in the area are primarily ponderosa pine with an understory of mixed oak, manzanita, needle and leaf litter, and scattered large (greater than <u>6 inch</u> diameter) dead logs. Much of the understory brush was heavily draped with very dry pine needles. Live fuel moisture in the manzanita and oak was very low (76%). Fine dead fuel moisture was 3% and 8% for larger dead fuels.

At 1230 on June 25, a dry lightning storm started a fire under the Mogollon <u>Rim</u>. The fire was on a steep, southwestfacing slope at 6,400 feet elevation. The fire was estimated from the air at 5 acres at 1330, at 50 acres one hour later, and at over 100 acres by 1615, with a spot fire one mile east of the main fire. By 1800, a Type 2 Incident Management Team (IMT) had arrived and a Type 1 IMT and 18 crews had been ordered. Brisk down canyon winds pushed the fire, and it was 1,900 acres by 0500 on June 26, threatening the forest subdivision of Bonita Creek Estates. A convection column, aided by combustion, began forming over the fire by 1000. The column continued to grow and became a fully mature thunderstorm by 1400. Radio and frequency issues caused a breakdown in communication between the crews and the IMT. The team transition mid-shift resulted in confusion between the crews and supervision. The thunderstorm also began to decay, creating strong downbursts channeled by the topography. This caused dramatic down- and cross-slope fire spread on nearly all sides of the fire. Members of the Perryville Fire Crew would not be able to escape from the fast and erratic fire spread. Five were injured. Six died on the fireline.

#### **Discussion Points:**

The fire behavior indicator system Look Up, Look Down, Look Around was developed in response to this tragic fire.

 Use Look Up, Down and Around in the Operational Engagement section (green) in the <u>Incident Response Pocket Guide (IRPG), PMS</u> <u>461</u>. What indicators are most significant in your area to let you know the fire behavior may become problematic?

Also, the Haines Index, a measure of the atmosphere's effect on a fire's growth potential, was adopted for inclusion on fire weather forecasts issued by the National Weather Service.

 Review and discuss Haines Index (Other References section, white) in the <u>IRPG</u>.

In his paper "<u>LCES and Other Thoughts</u>," Paul Gleason writes about kneeling next to one of the Perryville firefighters and of his promise to help end needless fatalities and near misses.

- Review LCES (Operational Engagement section, green) in the <u>IRPG</u> and discuss how you and your crew will establish and maintain LCES.
- Discuss the difference between establishing LCES and maintaining LCES.

What are common barriers to maintaining LCES?

We honor these firefighters today by learning about the lessons they learned the hard way and by using this tragic event as a tool to keep ourselves and our crews safe on the fireline. Use the following resources:

- Dude Fire Staff Ride
- Fire Investigation Report
- Dude Fire Fire Weather Behavior
- "LCES and Other Thoughts" by Paul Gleason
