## Alaska Area (PL 5)

New fires: 15
New large incidents: 0
Uncontained large fires: 0
Type 1 IMTs committed: 1
Type 2 IMTs committed: 4
Clear, Fairbanks Area, Alaska DOF. IMT 2 (NW Team 10). Ten miles northwest of Anderson, AK. Timber and short grass. Active fire behavior with creeping, torching and group torching. Numerous residences threatened. Evacuations in effect.

Minto Lakes, Fairbanks Area, Alaska DOF. IMT 1 (CA Team 1). Nineteen miles north of Whittier, AK. Timber and hardwood litter. Minimal fire behavior with flanking, backing and smoldering. Residences threatened. Area, road and trail closures in effect.

Lime Complex (14 fires), Southwest Area, Alaska DOF. IMT 2 (AK Green Team). Fifty miles east of Chuathbaluk, AK. Grass, timber and brush. Active fire behavior with flanking, running and torching. Numerous structures, communication and energy infrastructure threatened. Precipitation occurred over the fire area yesterday.

Bean Complex (5 fires), Tanana Zone, BLM. IMT 2 (NW Team 7). Started on state land 100 miles west of Fairbanks, AK. Timber and short grass. Active fire behavior with running, torching and spotting. Structures threatened. Precipitation occurred over the fire area yesterday.

Middle Tanana Complex, Delta Area, Alaska DOF. IMT 2 (NR Team 3) mobilizing. Thirty-two miles northeast of Delta Junction, AK. Timber. No new information.

Dalton Highway Complex (4 fires), Tanana Zone, BLM. Twenty-five miles south of Coldfoot, AK. Timber and short grass. Active fire behavior with backing, single tree torching and smoldering. Structures and energy infrastructure threatened. Last narrative report unless significant activity occurs.

Goose, Upper Yukon Zone, BLM. Started on FWS land 42 miles northwest of Chalkyitsik, AK. Timber, tall grass and brush. Moderate fire behavior. Last narrative report unless significant activity occurs.

Central Creek Airstrip, Delta Area, Alaska DOF. Previously reported incident. Thirty-one miles northeast of Delta Junction, AK. Timber. Active fire behavior. Last narrative report unless significant activity occurs.

Predictive Services Discussion: Above normal temperatures and dry conditions will develop across the eastern half of Alaska, with isolated to scattered thundertorms likely. However, widespread smoke will continue to impact weather forecasts, especially north of the Alaska Range. Lingering dry and breezy conditions are likely across portions central and southern portions of the Great Basin, and scattered to numerous monsoonal thunderstorms are expected across eastern Arizona, the Colorado Rockies, and much of New Mexico into the Trans Pecos. Hot temperatures will spread across the southern and central Plains into the Midwest and Southeast, with relative humidity likely dropping below $30 \%$ across the southern and central Plains into Texas and possibly the Ozarks. Scattered thunderstorms will continue across the Southeast, with scattered strong to severe thunderstorms expected from southwest Montana through portions of the Midwest and into the MidAtlantic.

# South Canyon Fire (Colorado) - July 6, 1994 

## Perspective by the Redding Interagency Hotshot Crew (IHC)

## Today's topic is dedicated to all fallen firefighters.

Lightning ignites a fire in piñon/juniper on a ridge at the base of Storm King Mountain near Glenwood Springs, CO. The area has experienced drought conditions, low humidity, and record-high temperatures. Over the next two days, the South Canyon Fire increases in size and initial attack resources are assigned. Four days later, on July 6, a dry cold front moves into the fire area. The crews on Storm King Mountain do not receive the Red Flag Warning. At 1600, the fire blows up and makes several rapid runs. Forty mile per hour winds push the blowup to the ridge in two minutes. Fourteen firefighters perish as they try to outrun the flames.

Since 2003, the Redding IHC's mission and emphasis has evolved to a small unit leadership development approach with staff rides becoming an integral part of the crew's curriculum. The crew culminates an intense, six-week training program by participating in the South Canyon staff ride. "As we climbed, periodically stopping to discuss events as they had unfolded back in 1994, we recognized logistical dilemmas. We proposed alternative tactics that could have been used. And with each discussion, we began to see and understand how this tragic chain-of-events unfolded." - Redding IHC crew member

The South Canyon staff ride started as a smaller event, with just the crew and a few other participants. Since then, other IHCs and 20 to 25 additional participants from different agencies and backgrounds attend the staff ride annually.

Over the years many of the survivors of the incident have been invited to attend the staff ride and share their on-the-ground experiences from the events that transpired that day. Their presence has made a memorable impact on the participants. They all add insight that only someone who was on scene at the time could provide and have been extremely open to questions asked by the participants. Other subject matter experts have contributed to the staff rides over the years and brought insights on dealing with a tragedy at the home unit, the fire behavior, and more.
"Our staff ride's secondary benefits include the emotional impact, reinforcement of

> "Stepping on the ground of the South Canyon Fire was without a doubt the most beneficial training and learning experience of my fire career. It is our responsibility to study and learn the lessons from this event." - Staff ride participant pride in the profession, and strengthening of crew cohesion. Sharing the lessons of an emotional experience like South Canyon bonds a crew together. It reminds and reinforces that we do a dangerous job and without each member of the crew working together, it can lead to disastrous results. Every crew member now realizes that he or she is not only responsible for themselves, but that their actions can also affect everyone around them." - Redding Hotshot Crew's May 2003 South Canyon Fire Staff Ride Report.

After the staff ride is complete, Redding IHC leadership tasks the crew members with writing an essay on what the South Canyon staff ride meant to them. Here are a few of the comments received:

- "I came away realizing the importance of situational awareness and LCES. I now find myself more alert and aware of my surroundings in the fire environment."
- "I know the lessons that were learned through the numerous hours of studying, countless discussions, and the physical visit to the site will benefit me through the rest of my fire career."
- "Without blame and any previous biases about what we might have thought happened here, I realized that this training probably had the most impact on me than any other training I have ever received."
- "I have never had any training that relayed messages as vividly as this did. I have never had training that left me both excited about what I learned - as well as awestruck by what I learned."
- "This experience is something that cannot be replicated or performed in a lecture or a classroom with similar long-lasting results."
"There was nothing in the books that could have completely prepared them for this experience. No picture can show how close 21 seconds to safety actually is ( 121 feet). Or how far Tyler and Browning, actually ran ( 1,841 feet) trying to find a way out. The frustration of being so close cannot be fully expressed. The feeling from all staff ride participants was that this is a powerful and positive learning experience." - Redding Hotshot Crew’s May 2003 South Canyon Fire Staff Ride Report

The crew will continue to make this staff ride the culmination of their training program as the benefits, experience, and knowledge gained are extremely beneficial to the development of our future leaders in wildland fire.
