# National Interagency Coordination Center <br> Incident Management Situation Report <br> Saturday, July 30, 2022 - 0730 MDT <br> National Preparedness Level 3 

National Fire Activity:
Initial attack activity:
New large incidents:
Large fires contained:
Uncontained large fires: **
Area Command teams committed:
NIMOs committed:
Type 1 IMTs committed:
Type 2 IMTs committed:
***Complex IMTs committed:

Light (100 fires)
5
2
14
0
0
4
6
1
***Complex Incident Management Teams (CIMTs) are configured to respond to large, complex fires and can expand and reduce staffing in all functional areas as necessary to meet the needs of the incident.

Nationally, there are 57 fires being managed under a strategy other than full suppression.
**Uncontained large fires include only fires being managed under a full suppression strategy.

*1 Hectare = 2.47 Acres

Predictive Services Discussion: A high-pressure ridge will persist over the western CONUS today producing very hot temperatures, likely a degree or two above yesterday's highs, across the inland Northwest as the ridge strengthens and shifts slightly eastward. Relative humidity in this region will likely drop a few percent down from recent condition, except in portions of northern California and southern and central Oregon, where the possibility of isolated afternoon and evening thunderstorms remains. Weak disturbances imbedded in the northwest flow may also bring isolated showers and thunderstorms to Wyoming and the northern Great Plains this afternoon. Monsoonal thunderstorms will continue over much of the greater Four Corners area as well as the southern half of Nevada and parts of southern California. Flash floods are possible in the vicinity of the storms in the Southwest and into the Southern High Plains. The far southern Plains continue to experience hot, dry, unstable, and breezy conditions, with the possibility of thunderstorms and gusty winds in far northeast Texas, parts of Oklahoma and into Arkansas. Precipitation is also forecast to continue from lower Mississippi Valley to the southern Atlantic Coast.

SAFENET<br>Fire Communication Category

The SAFENET system is a way for firefighters and support staff to report unsafe or unhealthy situations and near-misses. SAFENET is an easy, quick way to report a safety concern. It allows firefighters to be involved in the daily job of being safe and keeping others safe by documenting and helping to resolve safety issues. It is also a way for fire managers to hear about and correct hazardous conditions, collect and track important safety data, and identify trends that could be developing.

Here are some facts about SAFENET and how it works:

- Individuals who observe or are involved in an unsafe situation should initiate immediate corrective action, if possible. The occurrence should then be reported via SAFENET.
- Reports should identify unsafe situations in wildland fire, all-hazard operations, training, and other related work environments.
- SAFENET is a confidential database. Users are encouraged but not required to put their name and contact information on the report.
- SAFENET reports are sanitized to display safety and health-related information only, and they will not identify the names of individuals, crews, or other resources.
- If the reporting party did not observe the situation first-hand, the SAFENET report will likely not be published. Instead of filing a report, encourage those who were directly involved to do so.
- SAFENET reports that do not include the name of the incident and/or location of the event will not be posted.
- SAFENET reports that contain unprofessional content (e.g., personal attacks/slander, character defamation) will not be posted, or the offensive comments will be removed prior to posting.
- There is no punishment or penalty for filing a SAFENET report, nor is it mandatory.

## Submit a SAFENET Report

Submit directly to the SAFENET system: https://safenet.nifc.gov/safenet.cfm
For information regarding the SAFENET program please contact: SAFENET_Administrator@blm.gov
