

**National Interagency Coordination Center
Incident Management Situation Report
Thursday, August 4, 2022 – 0730 MDT
National Preparedness Level 3**

National Fire Activity:

Initial attack activity:	Light (105 fires)
New large incidents:	7
Large fires contained:	6
Uncontained large fires: **	25
Area Command teams committed:	0
NIMOs committed:	0
Type 1 IMTs committed:	3
Type 2 IMTs committed:	8
***Complex IMTs committed:	2

***Complex Incident Management Teams (CIMTs) are configured to respond to large, complex fires and can expand and reduce staffing in all functional areas as necessary to meet the needs of the incident.

Nationally, there are 59 fires being managed under a strategy other than full suppression.

**Uncontained large fires include only fires being managed under a full suppression strategy.

Predictive Services Discussion: Elevated to critical conditions will spread across much of central and eastern Montana into portions of western Montana as westerly sustained winds of 15-25 mph gusting to 25-45 mph amid minimum relative humidity 10-25% develop. Locally elevated conditions are likely in portions of central and eastern Washington and central and eastern Oregon as west-northwest winds strengthen, but minimum relative humidity should remain mostly above 20-25% in Washington and northern Oregon, while dropping to 10-20% in central and eastern Oregon. Isolated to scattered mixed wet and dry thunderstorms are expected across southern and eastern Idaho into southern and central Montana and possibly northeast California and northwest Nevada. Strong to severe thunderstorms are possible from east-central Idaho into central Montana as well. Monsoon thunderstorms, with scattered to widespread coverage, will continue south of these areas across the Great Basin, eastern California, Southwest, and Colorado.

Hot, dry, unstable, and breezy conditions will develop on much of the central and southern Plains, and thunderstorms are possible from Texas Panhandle through Oklahoma, which may ignite and spread new fires. Scattered to widespread thunderstorms are expected across much of the eastern US, and warm and dry conditions are expected across much of the Interior into south-central and southeast Alaska.

Subjective vs. Objective Hazards

Operational Engagement Category

A popular mountaineering test divides the alpinists' hazards into two distinct types: subjective, which one has direct control over (e.g., condition of the equipment, the decision to turn back) and objective hazards, which are inherent to the alpine environment (e.g., avalanches, rock fall).

Objective hazards are a natural part of the environment. They cannot be eliminated, and one must either:

- Not go into the environment where they exist, or
- Adhere to a procedure where safety from the hazard is assured.

Similarly, the wildland firefighter's hazards are either subjective or objective. Examples of subjective hazards would be working below a dozer constructing fireline or the use of improper techniques while felling a tree. The fireline supervisor has direct control over these types of hazards.

The wildland fire environment has four basic objective hazards: lightning, fire-weakened timber (standing and lying), rolling rocks, and entrapment by running fires. When these hazards exist, the options are:

- Not enter the environment, or
- Adhere to a safe procedure.
 - The key to a safe procedure is Lookout(s), Communications(s), Escape Routes, and Safety Zones (LCES).

The nature of wildland fire suppression dictates continuously evaluating and, when necessary, re-establishing LCES as time and fire growth progress.

- Identify subjective or objective hazards of working in the vicinity of or associated with:
 - Dozer(s) or Tractor Plows
 - Snags
 - Helicopters
 - Fixed-Wing Aircraft
 - Other Engines and Vehicles
 - All-Terrain Vehicles (ATVs)
 - Oil and Gas Wells and Pipelines
 - Power Lines
 - Floating Divisions
 - Wildland Urban Interface (WUI)
