

**National Interagency Coordination Center  
Incident Management Situation Report  
Wednesday, August 17, 2022 – 0730 MDT  
National Preparedness Level 3**

**National Fire Activity:**

Initial attack activity:	Light (106 fires)
New large incidents:	7
Large fires contained:	3
Uncontained large fires: **	26
Area Command teams committed:	0
NIMOs committed:	1
Type 1 IMTs committed:	3
Type 2 IMTs committed:	10
***Complex IMTs committed:	0

\*\*\*Complex Incident Management Teams (CIMTs) are configured to respond to large, complex fires and can expand and reduce staffing in all functional areas as necessary to meet the needs of the incident.

Nationally, there are 51 fires being managed under a strategy other than full suppression.

\*\*Uncontained large fires include only fires being managed under a full suppression strategy.

**Predictive Services Discussion:** Isolated to scattered mixed wet and dry thunderstorms are likely across northern California, northwest Nevada, and southern and central Oregon, and some thunderstorms may continue overnight. Away from the thunderstorms, temperatures will be 8-20°F above normal in much of California, the Inland Northwest, Idaho, and Montana with RH below 20%, including widespread areas in the single digits. Pyrocumulonimbus development is possible on very active large fires in the vicinity/periphery of dry thunderstorm development. Hot, dry, and unstable conditions are likely again for portions of central and north Texas, with isolated thunderstorm providing chances of lightning ignitions as well.

The monsoon will continue across the greater Four Corners region into southeast California and southern Nevada. Scattered to widespread thunderstorms are likely in the Southeast extending through the central Appalachians. The northern Plains into Minnesota are likely to have isolated to scattered thunderstorms and showers as well.

# Unburned Fuel Between You and The Fire

*Operational Engagement Category*

It is important for firefighters to recognize Watch Out Situation #11, unburned fuel between themselves and the fire. Often it is not possible or practical for direct attack on a fire. Before attempting indirect attack and any time the firefighter is in a position where there is unburned fuel between them and the fire, the following questions must be addressed immediately:

- Can you see the fire or are you in contact with someone who can? Discuss situations you might find yourself in where you are out in the green and cannot see the fire. What can you do?
- Is fire spread in a direction away from you? Do you consider the potential for fire spread? Are you safe if the wind switches?
- Will your position be defensible when the fire reaches you? Talk about what must be understood when building indirect line or approaching a fire through the green.
- Is your line anchored? Discuss how you anchor indirect line.
- Are your escape routes and safety zones adequate? What is adequate?
- Are weather indicators constantly changing?
- To reduce the risks:
  - Post lookouts.
  - Consider a different location.

Review situations where you constructed indirect line or approached a fire through the green and how you provided for your safety.
