

**National Interagency Coordination Center
Incident Management Situation Report
Thursday, September 1, 2022 – 0730 MDT
National Preparedness Level 3**

National Fire Activity:

Initial attack activity:	Light (88 fires)
New large incidents:	6
Large fires contained:	0
Uncontained large fires: **	18
Area Command teams committed:	0
NIMOs committed:	1
Type 1 IMTs committed:	2
Type 2 IMTs committed:	9
***Complex IMTs committed:	0

***Complex Incident Management Teams (CIMTs) are configured to respond to large, complex fires and can expand and reduce staffing in all functional areas as necessary to meet the needs of the incident.

Nationally, there are 31 fires being managed under a strategy other than full suppression.

**Uncontained large fires include only fires being managed under a full suppression strategy.

[Link](#) to Geographic Area daily reports.

[Link](#) to Understanding the IMSR.

One RC-26 aircraft with Distributed Real-Time Infrared (DRTI) capability and support personnel from the 141st Air Refueling Wing (Washington Air National Guard) have been deployed to Boise, ID.

One Boeing 737 airtanker from New South Wales, Australia is supporting fire suppression efforts in the western United States.

Northwest Area (PL 3)

New fires:	24
New large incidents:	2
Uncontained large fires:	8
Type 1 IMTs committed:	1
Type 2 IMTs committed:	5

Rum Creek, Medford District, BLM. IMT 1 (ODF Team 1) and IMT 2 (NW Team 13). Twelve miles northwest of Hugo, OR. Timber and closed timber litter. Active fire behavior with uphill runs, backing, short-range spotting. Numerous structures threatened. Evacuations, area, road and trail closures in effect.

White River, Okanogan-Wenatchee NF, USFS. IMT 2 (NW Team 8). IMT is also managing the Irving Peak fire. Twenty-three miles northwest of Leavenworth, WA. Timber. Active fire behavior with flanking, backing and isolated torching. Numerous structures threatened. Area, road and trail closures in effect.

Irving Peak, Okanogan-Wenatchee NF, USFS. Twenty-six miles northwest of Leavenworth, WA. Timber. Active fire behavior with uphill runs, flanking and backing. Structures threatened. Area, road and trail closures in effect.

Crockets Knob, Malheur NF, USFS. IMT 2 (NW Team 12). Nineteen miles north of Prairie City, OR. Brush and timber. Active fire behavior with uphill runs, flanking and group torching. Structures threatened. Area, road and trail closures in effect.

Cedar Creek, Willamette NF, USFS. IMT2 (NW Team 6). Fifteen miles east of Oakridge, OR. Timber and closed timber litter. Moderate fire behavior with backing, creeping and single tree torching. Structures threatened. Area, road and trail closures in effect.

Windigo, Umpqua NF, USFS. IMT 2 (NW Team 9). IMT is also managing the Potter and Big Swamp fires. Twenty miles southwest of La Pine, OR. Closed timber litter, timber and medium slash. Minimal fire behavior with creeping and smoldering. Area, road and trail closures in effect.

Potter, Willamette NF, USFS. Forty-six miles southwest of La Pine, OR. Closed timber litter, timber and medium slash. Minimal fire behavior with creeping and single tree torching. Area, road and trail closures in effect.

Big Swamp, Willamette NF, USFS. Thirty-seven miles southwest of La Pine, OR. Closed timber litter, timber and medium slash. Minimal fire behavior with creeping. Area, road and trail closures in effect.

* **Copper Lake**, North Cascades NP, NPS. Thirty-six miles northeast of Deming, WA. Timber. Active fire behavior with short crown runs, uphill runs and short-range spotting. Last narrative report unless significant activity occurs.

* **Goat Mountain Two**, Wallowa-Whitman NF, USFS. Nine miles south of Lostine, OR. Timber. Active fire behavior with group torching and backing. Last narrative report unless significant activity occurs.

Sturgill, Wallowa-Whitman NF, USFS. Previously reported incident. Fifteen miles southwest of Enterprise, OR. Timber. Active fire behavior with short crown runs, uphill runs and flanking. Last narrative report unless significant activity occurs.

Predictive Services Discussion: Isolated mainly dry thunderstorms are likely to be ongoing across north-central Montana in the morning. Well above normal, near record-setting, temperatures are expected again, with most areas in the 90s to low 100s across the West. Very low relative humidity of 6-20% will continue across much of the West, with the lowest values in northern California into central Oregon and across portions of the Great Basin into the Northern Rockies. Poor overnight relative humidity of 15-35% will continue for mid-slopes and ridges across the northwestern US as well. Breezy west to northwest winds of 15-25 mph with gusts 25-35 mph will develop across portions of central Idaho and central and eastern Montana this afternoon creating elevated to locally critical conditions. High fire activity is expected to continue across the northwestern US, especially on existing large fires. Scattered to numerous thunderstorms are expected across much of Texas, with isolated to scattered thunderstorms along the Gulf Coast and Florida. Isolated thunderstorms are likely over the higher terrain of New Mexico and southern Colorado, with isolated to scattered thunderstorms developing over portions of Nebraska and Kansas.

This Day in History is a brief summary of a powerful learning opportunity and is not intended to second guess or be judgmental of decisions and actions. Put yourself in the following situation as if you do not know the outcome. What are the conditions? What are you thinking? What are YOU doing?

Sundance Fire (Idaho) – September 1, 1967

Incident Summary: The Sundance Fire is remembered for its extreme fire behavior. A crown fire, in heavy timber, pushed the fire 16 miles in a single burning period. Two firefighters perished in the blowup event.

Factors Influencing Fire Behavior: Lightning started several fires in mid-August of 1967 in the Selkirk Mountains of northern Idaho. The area was in moderate drought conditions. The last wetting rain was in June, and fire danger was classified as extreme. Fuels in this mountainous area were mostly comprised of timber with areas of logging slash. One fire, the Sundance Fire, ignited near the west side of Sundance Mountain summit; it spread relatively slowly at the outset, growing to only 35 acres by August 23. On August 29 and 30, the fire made a major downhill run towards Priest Lake, pushed by strong northeast winds. By August 31, the fire was at 4,000 acres. On September 1, a dry cold front with very strong southwest winds moved over the fire area. The fire weather forecast issued at 0800 called for scattered afternoon and evening thunderstorms, temperatures down five degrees, humidity up 5%, and south-southwest winds at 12 to 18 mph.

Human Factors and Fire Operations: In response to the fire's growth, a US Forest Service fire management team was ordered, and it assumed command of the incident at 1000 on September 1. Much of the focus was on the fire's movement to the west, as there was no imminent threat perceived of the fire spreading to the east and over the Selkirk Divide. Indeed, earlier that morning, a dozer with operator and Sector Boss (similar to a Task Force Leader [TFLD] or Strike Team Leader Heavy Equipment [STEQ] in today's organization) were deployed on that side of the Divide, several miles northeast of the fire. Around 1100, they were briefed by a supervisor on work objectives and escape routes. The dozer was assigned to open up roads in the McCormick Creek drainage, starting near the Pack River and moving southwest and up canyon, towards the Selkirk Divide. Fault Lake, their designated safety zone, was four miles and 3,000 vertical feet further up the canyon, and work was to progress toward the safety zone. Due to limited supplies and equipment, the Sector Boss had neither a vehicle nor a two-way radio. The dozer operator had a knee injury that hampered his mobility.

The Blowup: On September 1, starting at 1300 with the onset of strong southwest winds, the Sundance Fire became very active, making a significant run up the Soldier Creek drainage, which is aligned mostly in a west to east direction, to the Selkirk Divide. Between 1400 and 1600, the fire crossed east over the Selkirk Divide and burned downslope through the southwest-to-northeast aligned McCormick Creek Canyon and then into the Pack River drainage, where the dozer had worked its way to within ¼ mile of Fault Lake. At 1600, the fire overran the dozer operator and Sector Boss, killing both. During this blowup event, the Sundance Fire experienced winds of 30 to 50 mph from early afternoon into the night. In the nine-hour period from 1400 to 2300, the fire increased by 50,000 acres and advanced 16 miles to the northeast, with long-range spotting up to 10 miles.

Discussion Points:

Prior to the blowup, there were signals of escalating risk. Discuss the following:

- Given the predicted weather, extreme fire danger, and other factors, what are your concerns?
- The dozer operator was partially handicapped due to an injured knee. How would you handle an injury that limits your physical ability or that of a coworker?
- How did the alignment of general winds with major canyons and drainages affect fire behavior?
- The Sundance Fire was not predicted to spread into McCormick Creek. Once the fire advanced to the east side of the Divide, what actions would you take?
- Given similar circumstances, discuss how you and your crew could apply LCES throughout the day.
- In the [Incident Response Pocket Guide \(IRPG\), PMS 461](#), review Human Factor Barriers to Situation Awareness and discuss this in relation to the Sundance Fire.
