Predictive Services Discussion: An upper low will slowly track northeast and move onshore into northern California late this afternoon. Rain, with some embedded thunderstorms, will continue over much of northern California into portions of central California while extending through southern and central Oregon and into western Nevada. Scattered to numerous wet thunderstorms are expected across the greater Four Corners region, while isolated to scattered thunderstorms are likely across the Great Lakes, south Texas, and Florida Peninsula. Gusty east-northeast winds of 10-20 with gusts to 40 mph amid minimum relative humidity of 15-30% are likely from north-central Oregon into the Washington Cascades and Columbia Basin. Southerly sustained winds of 10-20 mph gusting 25-35 mph amid minimum relative humidity of 10-25% are expected across the southern and eastern halves of Nevada into western Utah, southeast California, southern Idaho, and far northwest Arizona. Relative humidity is likely to drop below 35% across much of the Southeast and below 25% on much of the southern and central Plains coinciding with well above normal temperatures.

Base All Actions on Current and Expected Fire Behavior *Weather – Fire Behavior Category*

Discussion Points:

- Can you observe the area or use scouts? What information are the scouts looking for?
- Have escape routes and safety zones been thoroughly scouted? List some ways your crew will scout out an area before you begin working.
- Are escape routes and safety zones marked for night use? How do you adjust marking safety zones and escape routes for night use?
- Have potential dangers been located and can they be dealt with? List some dangerous fire behavior you may encounter and how you would deal with it.
- Do you have access to weather and fire behavior forecasts? What is your unit's procedure for obtaining forecasts?
- Can the resources you are replacing give you a thorough briefing? What information will you want to get from these resources?
- To reduce risk, initiate the following:
 - Post lookouts.
 - Check communications.
 - Retreat if you have doubts about your escape routes or safety zones, or if the situation becomes too complex. Discuss fires where you have adjusted your actions based on current and expected fire behavior.

How would you judge the fire season? (Above normal, below normal, or average.)
