Predictive Services Discussion: An upper low is forecast to track northeast from northern California into eastern Oregon and Idaho today. Numerous to widespread showers are expected across much of northern California through Oregon into Washington and across Idaho into western and central Montana. Isolated to scattered thunderstorms will be embedded within and ahead of the showers, and the highest rainfall amounts are likely to be from the Oregon Cascades to the central mountains of Idaho and southwest Montana. Additionally, scattered to numerous wet thunderstorms are expected across Arizona, Utah, New Mexico, and Colorado into Wyoming, with the heaviest rain and potential flooding likely in western Colorado. Strong to severe thunderstorms are likely across the eastern Great Lakes into the Northeast as well. Lingering dry and breezy conditions are likely in portions of southern and eastern Nevada and eastern Washington. Hot and dry conditions, including relative humidity below $25 \%$ in some areas, is likely across the Southeast and southern Plains.

Accurate situation awareness (SA) requires a constant reassessment of conditions (existing and potential) that may impact the safety and effectiveness of tactics. Monitor for the 18 Watch Out Situations and establish trigger points (in the form of operational or environmental limits) ahead of time.
Remember, trigger points are not decision-makers but serve as predetermined cues to prompt you to reevaluate the current and potential situation and its associated risks. They help you to determine and implement the proper course of action.

The following items are considerations in your planning and discussion.

- Use trigger points for preplanning. Do not wait until you are in the wrong place at the wrong time - with no time.
- Trigger points should be based on measurable factors such as:
- Relative Humidity (RH).
- Winds.
- Fire behavior.
- Topographical boundaries.
- Time constraints/time of day.
- Time/distance to safety zones.
- Loss of suppression resources.
- Other operational considerations (e.g., firefighter fatigue, loss of lookouts or communication, weather change).
- As you approach predetermined trigger points, go through the Risk Management Process to help you decide if a change in tactics is required:
- Identify hazards.
- Assess hazards.
- Develop controls and make risk decisions.
- Implement controls.
- Supervise and evaluate.
- Consider the following command/leadership responsibilities when changing tactics:
- Communicate the changes to your subordinates, as well as to adjacent forces and up the chain of command.
- Account for all your people.
- Make sure everyone knows and follows the new plan.
