Predictive Services Discussion: Upper ridging will build over the West, with temperatures rising to above normal west of the Continental Divide. Relative humidity will fall to $5-15 \%$ across portions of California and the Great Basin but winds will be light. A cold front will move through the Great Lakes and Mid-Mississippi Valley into the Lower Mississippi Valley and southern Plains. Hot, dry, and breezy conditions are expected ahead of the front across the southern Plains as south-southwest winds $10-20 \mathrm{mph}$ with gusts $20-30 \mathrm{mph}$ develop amid relative humidity of $15-25 \%$. Very dry conditions will continue over much of the Southeast as well, as relative humidity falls below $30 \%$, with locally elevated conditions possible across portions of Virginia and North Carolina due to west winds of $10-15 \mathrm{mph}$. Scattered showers and thunderstorms are likely near the front from the Great Lakes through the Ohio Valley into the Lower Mississippi Valley, but amounts are expected to be light. Scattered wet thunderstorms are likely over south Florida, while isolated wet thunderstorms remain possible over far southern Arizona and New Mexico.

Entrapment Avoidance
Operational Engagement Category

When determining strategy and tactics, avoid situations where firefighters may become entrapped. Consider the following discussion points related to escape
routes and safety zones.

- Discuss the three types of safety zones and describe examples.
- The burn/black
- Natural features
- Constructed sites
- Discuss the guidelines for size and distance separation to avoid radiant heat injury.
- Four times the maximum flame height ( 20 foot-flame height $\times 4=80$ foot-radius from firefighters)
- Size based on amount of resources and equipment
- Discuss heat impact factors that will affect the guidelines for distance separation.
- Convection heat from wind and terrain features
- Location relative to fire spread
- Reburn potential of fuel in safety zone
- Discuss how firefighters have a right to know the location of their escape routes and safety zones at all times.
- Discuss how firefighters have a right to ask for clarification when faced with unclear instructions or fear of the unknown.
- Describe a basic procedure for identification of effective escape routes and safety zones.
- Observe
- Visualize
- Identify
- Time
- Inform
- Evaluate
