**Predictive Services Discussion:** A cold front will move into Texas, the Appalachians, and Northeast this afternoon and evening. Northerly post-frontal winds of 12-20 mph with gusts 20-35 mph are expected across much of the Plains into the western Mississippi Valley as relative humidity falls to 12-25%, with locally critical conditions most likely across South Dakota and Oklahoma. Isolated to scattered thunderstorms are expected along and ahead of the front from north Texas and through the Tennessee Valley into the Appalachians. More widespread showers with isolated thunderstorms are forecast in the Great Lakes and Northeast. Upper ridging will continue to bring above normal temperatures to the West with thermal troughing likely in central California into southwest Oregon. The lowest afternoon relative humidity of 7-20% is forecast across California, eastern Oregon, and the Great Basin, but winds are expected to remain light. Isolated thunderstorms will develop near the Mexican border from southeast California into far west Texas.

# Fatigue & Stress

## Firefighter Health & First Aid Category

Accumulated (chronic) Fatigue is defined as fatigue from which normal rest does not produce recovery. Accumulated fatigue is often caused by extended periods of stress with inadequate recovery periods, which results in decreased productivity, compromised immune function, and reduced alertness. Fatigued workers perform poorly, behave carelessly, tolerate greater errors, and become inattentive. Chronic fatigue often results in increased stress, which may present itself through certain behavioral and physiological indicators, such as those described below:

### Behavioral indicators:

- Decreased motivation and low morale.
- Increased irritability and depression.

### Physiological indicators:

- Confusion, poor problem solving.
- Poor abstract thinking.
- Poor attention/decisions.
- Poor concentration/memory.
- Extreme emotional responses.
- Social/behavioral changes.

### Recommendations for chronic fatigue/stress are:

- Take longer periods of rest/recovery.
- Ensure that workers are adequately rested before they begin work shifts.
- Provide periodic rest breaks to allow physical and mental recovery.
- Alternate between heavy and light tasks.
- Eat well-balanced meals regularly, with energy supplements during periods of high exertion.
- Maintain hydration.
- Ensure workers maintain good personal hygiene.
- Maintain high standards of physical fitness and work capacity.
- In extreme cases, personnel may need to be relieved of their duties.
