Predictive Services Discussion: Hurricane Ian will move into the southeast Gulf of Mexico, west of the Florida Keys, bringing numerous showers and thunderstorms and gusty winds to much of the Florida Peninsula. North winds will increase across the Southeast to 10-20 mph with minimum relative humidity below 30% for areas of elevated fire weather conditions. Locally critical conditions are most likely over portions of Alabama and Georgia where areas of relative humidity below 20% are forecast. Locally breezy and dry north to northwest winds are also likely to continue across much of the Mississippi Valley. Above normal temperatures will continue across the West with afternoon relative humidity of 7-25%. West to southwest winds will increase east of the Cascades into the Columbia Basin, southeast Oregon, and northeast California. Elevated to locally critical conditions are most likely to develop across south-central Oregon and portions of the northern Great Basin due to sustained winds of 15-20 mph with gusts 25-30 mph amid relative humidity of 8-15%. Scattered afternoon wet thunderstorms are expected across the greater Four Corners area, while isolated thunderstorms are possible in the southern Sierra and southeast California.

Escape Routes: Take 5@2 Operational Engagement Category

Consider the following scenario:

It's 1400, you have been working all morning. How far away are your safety zones? Safety zones are only good if you can reach them. How long will your escape route take? What is the condition of the crew? How long will it take your slowest member to get there? Are your expectations realistic? Look at the times below. If your fire blows up right now, can you, and every member of your crew, make it to your safety zone?
