# National Interagency Coordination Center <br> Incident Management Situation Report <br> Tuesday, October 11, 2022 - 0730 MDT <br> National Preparedness Level 2 

National Fire Activity:
Initial attack activity:
New large incidents:
Large fires contained:
Uncontained large fires: **
Light (58 fires)
4

Area
Area Command teams committed: 0
NIMOs committed: 0
Type 1 IMTs committed: 2
Type 2 IMTs committed: 3
***Complex IMTs committed: 0
***Complex Incident Management Teams (CIMTs) are configured to respond to large, complex fires and can expand and reduce staffing in all functional areas as necessary to meet the needs of the incident.

Nationally, there are 69 fires being managed under a strategy other than full suppression.
**Uncontained large fires include only fires being managed under a full suppression strategy.

Predictive Services Discussion: West to southwest sustained winds of $12-25 \mathrm{mph}$ with gusts $30-40 \mathrm{mph}$ amid relative humidity of $10-20 \%$ will develop this afternoon ahead of a cold front, creating elevated to critical conditions from the Front Range into the central Plains. Gusty southwest winds and low relative humidity will extend into portions of western lowa and southern Minnesota as well. Breezy west to northwest winds will also occur across portions of the northern Great Basin, western Wyoming, and West Slope. Low relative humidity of $18-30 \%$ will continue along the Lower Mississippi Valley as well.

Scattered showers and thunderstorms, some severe, are likely to develop well ahead of the cold front across eastern Kansas through the Mid and Upper Mississippi Valley into the Great Lakes. Isolated showers are possible behind the cold front in eastern Montana while isolated afternoon thunderstorms are likely over the transverse and peninsular ranges of southern California. Isolated thunderstorms are possible across far south Texas and portions of the Florida peninsula as well.
http://www.predictiveservices.nifc.gov/outlooks/outlooks.htm

Thunderstorms cause significant hazards for wildland firefighters, including downbursts. Downbursts can cause extreme fire behavior and lightning. When thunderstorm development is likely, lookouts should be aware of the signs.

Approaching thunderstorms may be noted by a sudden reverse in wind direction, a noticeable rise in wind speed, and a sharp drop in temperature. Rain, hail, and lightning occur only in the mature stage of a thunderstorm.

Situation Awareness: Sound waves move at different rates based on atmospheric conditions. Take the storm precautions below as soon as you hear thunder, not when the storm is upon you. Do not resume work in exposed areas until 30 minutes after storm activity has passed.

## Hazard Control:

- Take shelter in a vehicle or building if possible.
- If outdoors, find a low spot away from tall trees, wire fences, utility lines and other elevated conductive objects. Make sure the place you pick is not subject to flooding.
- If in the woods, move to an area with shorter trees.
- If only isolated trees are nearby, keep your distance twice the tree height.
- If in open country, crouch low, with feet together, minimizing contact with the ground. You can use a pack to sit on, but never lie on the ground.
- If you feel your skin tingle or your hair stand on end, immediately crouch low to the ground. Make yourself the smallest possible target and minimize your contact with the ground.
- Don't group together.
- Don't stay on ridge tops, in wide open areas, or near ledges or rock outcroppings.
- Don't operate landline telephones, machinery, or electric motors.
- Don't handle metal hand tools or flammable materials in open containers.
